

7NOX v3.0.20 Release Notes

AUCKLAND, March 22, 2024 — OpSys Solutions Ltd has announced updates to its after-hours HVAC scheduling platform 7NOX. Version 3.0.20 adds the following features.

User Interface

- **New “Coordinator” User Level (Location: Login Manager)**—As a user level, Coordinators now sit in between 7NOX Users and Managers. The new level is intended for tenant staff (e.g. Office Managers) to create and manage their own users, eliminating these tasks for property managers and owners.
- **Recurring Bookings Added to Mobile (Location: Recurring Bookings page)**—Users can now create and manage repeat bookings from the 7NOX mobile app. (Mobile).
- **Automated Emails for New Users (Location: Login Manager)**—When creating new users, managers can now choose to send automated emails that contain login credentials and links to training resources. (Desktop)
- **Recurring Booking Expiration (Location: Recurring Bookings page)**—Users can now set “Expires on” dates when creating recurring bookings to make them temporary (Desktop & Mobile).
- **Filter Logins by Site (Location: Login Manager)**—Now quickly find users for a site through filtering.

Integration

- **Niagara Module Daily Schedule Inhibit Button**—Inhibit button now disables downloading of daily schedules into the 7NOX schedule object in Niagara.
- **Site Device Upgrade**— The 7NOX Site Device now supports separate network connections via a USB network adapter. Connect the device to your BMS network and to the internet. Perfect for BMS networks without internet connectivity.

The 7NOX app is a cloud-based web app that automates the scheduling after-hours HVAC requests. OpSys Solutions Ltd is a hardware and software developer of building integration products.
