7NOX v3.5.1 Release Notes

AUCKLAND, New Zealand, 2nd February, 2026 — OpSys Solutions Ltd has announced updates to its after-hours HVAC scheduling platform, 7NOX. Version 3.5.1 focuses on stronger security, better reporting, and faster onboarding and administration.

Release highlights

- Security: New Multi-Factor Authentication (MFA) and Single Sign-On (SSO) options to strengthen account access.
- Reporting: Expanded reporting and history outputs, including Site Summary, Floor Summary, Custom Email Reports, Tenant Booking History, and Daily Usage Log.
- Administration: New work email self-registration to reduce time spent creating user accounts.
- Systems Integrators: New Import Manager for bulk upload plus white-label controls for Login title and Terms & Conditions.

What's new in 3.5.1

New — Security

Multi-Factor Authentication (MFA) — Adds an extra layer of protection for user accounts during sign-in.
Single Sign-On (SSO) — Supports streamlined sign-in via your organisation's identity provider (where configured).

New / Improved — Reporting & history outputs

Site Summary (Report) — High-level after-hours usage and cost totals across a site.
Floor Summary (Report) — Floor-level reporting to support validation, review, and billing workflows.
Custom Email Reports (Report pack) — Generate and send selected reports by email to nominated recipients.
Tenant Booking History (History) — A record of tenant booking activity for audit and follow-up.
Daily Usage Log (History) — Day-by-day usage detail to support troubleshooting, reconciliation, and reporting.

New — Account provisioning

Work email self-registration — Managers/Coordinators can set approved work email domains so users can create their own accounts using a work email address (reducing admin overhead and speeding onboarding).

Improved — Portal usability

UI enhancements — General improvements across the portal to improve functionality, navigation, and ease of use.

For Systems Integrators (SIs)

Import Manager — Bulk upload tools to speed up initial configuration and ongoing administration for larger sites and multi-tenant deployments.

White-label portal controls — New settings to customise Login Page title and Login Terms & Conditions for white-labelled portal instances.

Documentation & training resources

- **User Guide** — Updated
- **Manager Guide** — Updated
- **Systems Integrator Guide** — New

Action required

- **Managers/Coordinators:** Review and configure MFA/SSO options as required and set approved work email domain(s) if you want to enable self-registration.
- **Systems Integrators:** Use Import Manager for bulk onboarding where applicable; update white-label Login title and T&Cs if required.
- **End users:** If self-registration is enabled for your organisation, you can create your account using your approved work email.

The 7NOX app is a cloud-based web app that automates the scheduling after-hours HVAC requests. OpSys Solutions Ltd is a hardware and software developer of building integration products.
